#### Summary

- Non-parametric models
- K-NN for classification
- Locally weighted regression

### Parametric and non-parametric models

Parametric model: Model has a fixed number of parameters

#### Examples:

- Linear regression
- Logistic regression
- Perceptron
- ...

Non-parametric model: Number of parameters grows with amount of data

Simple non-parametric model: instance-based learning

### K-nearest neighbors

Classification problem:  $f: X \mapsto C$  with data set  $D = \{(\mathbf{x}_n, t_n)_{n=1}^N\}$ 

Classification with K-NN,

- Find K nearest neighbors of new instance x
- 2 Assign to x the most common label among the majority of neighbors

Likelihood of class c for new instance x:

$$p(c|\mathbf{x}, D, K) = \frac{1}{K} \sum_{\mathbf{x}_n \in N_K(\mathbf{x}_n, D)} \mathbb{I}(t_n = c),$$

with  $N_K(\mathbf{x}_n, D)$  the K nearest points to  $\mathbf{x}_n$  and  $\mathbb{I}(e) = \begin{cases} 1 & \text{if } e \text{ is true} \\ 0 & \text{if } e \text{ is false} \end{cases}$ .

## K-nearest neighbors examples

Requires storage of all the data set!

Depends on a distance function!

Luca locchi

10. Instance based learning

## K-nearest neighbors

Increasing K brings to smoother regions (reducing overfitting)

# Kernelized nearest neighbors

Distance function in computing  $N_K(\mathbf{x}, D)$ 

$$\|\mathbf{x} - \mathbf{x}_n\|^2 = \mathbf{x}^T \mathbf{x} + \mathbf{x}_n^T \mathbf{x}_n - 2\mathbf{x}^T \mathbf{x}_n.$$

can be kernelized by using a kernel  $k(\mathbf{x}, \mathbf{x}_n)$ 

Luca locchi

## Locally weighted regression

Regression problem  $f: X \mapsto \Re$  with data set  $D = \{(x_n, t_n)_{n=1}^N\}$ 

Fit a local regression model around the query sample  $\mathbf{x}_q$ 

- **1** Compute  $N_K(\mathbf{x}_q, D)$ : K-nearest neighbors of  $\mathbf{x}_q$
- 2 Fit a regression model  $y(\mathbf{x}; \mathbf{w})$  on  $N_K(\mathbf{x}_q, D)$
- 3 Return  $y(\mathbf{x}_q; \mathbf{w})$

# Locally weighted regression

#### Example with linear kernel

Luca locchi

## Summary

- Non-parametric models based on storing data (lazy approaches)
- No explicit model
- 3 Sensitive to parameters and distance function
- Require storage of all data

Luca locchi
